Dear parent: Your child _____ will receive treatment under oral sedation.

Please check the following boxes to related to your child's procedure:

- ☐ Your child won't go to sleep. Just get drowsy or sedated. Sometimes they cry during freezing or with loud noises. However, they quickly settled down. If they don't and the child is moving too much it's not safe to proceed. Therefore, we will stop treatment and book for general anesthesia instead.
- ☐ Some children don't react well to sedatives (about 3/10) instead of getting sedated they get upset, crying, yelling, punching. Like an "intoxicated" individual. There is no way to predict this. When it happens it is very hard for parents. Therefore, we will wait for the behavior to settle down and schedule for general anesthesia
- ☐ Some children do very well during sedation but after the sedatives wear off they get very upset and this is mostly related to the numbing feeling after. Pre-teen females tend to have a more emotional reaction after procedures completed
- ☐ Dental materials: silver amalgam fillings or SSC. Zirconia/white options also available upon request
- ☐ Please **do not** bring any siblings. One adult and one child. Bring them wearing comfortable clothes. PJ's, if they have a comforting item such a blanket, pillow or stuffy
- ☐ The drugs are given and then we wait for about one to two hours before the sedatives take full effect (it varies on each child). Recovery can also be slow. Children will only be allowed to leave the office until he/she has either finished a popsicle or a juice box to guarantee their airway is functional. This recovery time also varies among children
- ☐ Parents are advised to wait at reception area. However, you are welcome to come and see how your child is doing at any time during the appointment
